Scope and method

- **Tool:** c8 10.1.3 (native V8 coverage) with source maps, so results refer to the TypeScript source lines.
- **Measured code:** `src/lib/**` – all business logic (`services`), data access (`db`), validation, authentication helpers and the error funnel. `--all` is used, so files never loaded by a test count as 0 %.
- **Tests run under coverage:** the full unit suite (73 tests) and database integration suite (54 tests), all passed.
- **Not measured here:** Next.js route handlers (`src/app/api`) and React pages – thin wrappers that run only inside the Next.js server. They are validated by the System Validation Report: all 53 API operations exercised, 59/59 system test cases passed.
- **Reproduce:** `npm run test:coverage` (HTML report in `coverage/index.html`).
